Allowable Subject Matter

1. Claims 1 and 2 are allowed.

1. The following is an examiner's statement of reasons for allowance: The art of record does not teach or fairly suggest a continuous heat treated double tapered steel wire, as claimed, having variable diameter portions such that the tensile strength of the small diameter portions is substantially equal to the tensile strength of the large-diameter portions; and the process of continuously heat treating a double tapered steel wire comprising the steps of continuous detecting steel wire diameter and controlling the amount of energy of induction heating supplied to said steel wire wherein the amount of said energy is proportional to a wire diameter of said wire having been detected so that said wire is evenly heated over the entire length of said wire at the same temperature followed by at least one of quenching and tempering .

2. As stated in applicant's remarks dated 5-04-05, the applied prior art does not teach or fairly suggest the concept of the present invention. JP'989 method is directed to evenly heating a straight steel rod to a predetermined temperature, which temperature is required in a subsequent press-forging process of the steel rod thus heated. Moreover JP'417 and Kato are directed to a method for forming or shaping a constant-diameter rod work piece into a tapered rod by diameter reducing heated portions of said workpiece . The prior art tapered rod would not have uniform tensile strength since large diameter portions and small diameter portions are not evenly heated to the same temperature.
